

Pocket Smart AI – Conclusion

Team Leader: I. Sabana Fathima

1. Topic

Conclusion

Epic: Conclusion

2. Project Overview

Pocket Smart AI is an AI-powered application built with FastAPI that uses Google Gemini AI. The project covered Gemini API setup, FastAPI initialization, modular architecture, login and register routing, and the startup and main function.

3. Objective

To summarize the work completed in the project, the results achieved, and the overall outcome of the Pocket Smart AI application.

4. Work Steps

- 1 Review all the epics and the work completed in each one.
- 2 Confirm that the Gemini API works and the key is stored securely.
- 3 Confirm that the FastAPI app, modular structure, and routes work together.
- 4 Test the complete flow: startup, register, login, and AI features.
- 5 Note the results and any improvements for the future.
- 6 Prepare the final summary for the team leader.

5. Main Parts of the Conclusion

- Summary of completed work
- Final testing results
- Key learnings
- Future improvements

6. Expected Outcome

A clear final summary showing that the Pocket Smart AI backend is complete, working, and ready for use, along with ideas for future improvement.
